Prefix: Miss

First Name: Trista

Last Name: Delzer

Degree: Bachelors in Microbiology

On Behalf Of: no

Title:

Department:

Company:

Country: United State

Comments: I fully support your five-year plan. I find animal testing to be cruel and most the time unnecessary. I truly believe that in ten years time animal testing will no longer be conducted. Animal testing does not insure safety by any means, let us not forget that aspirin causes teratogenic malformations in mice, rats, dogs, cats, rabbits, and monkeys and Lasix was shown to cause extensive liver damage to mice. The pharmaceuticals Thalidomine, Oralflex, Flenac, Butazolidin, Cylert, Inocor, and Baycol were all proven safe when tested on animals but when released to the market for human use caused thousands of birth defeats, liver ailments, and in some cases fatal. All my household cleaning and cosmetic products are cruelty free and have been just as safe as the products that have been tested on animals.
